CALENDULA ORANGE GEM

13A. Exhibit A:

Selected out of a cross made in 1960 between Pacific Beauty Persimmon Beauty, an orange variety, and the dwarf variety Muraji from the Dai Ichi Seed Co. of Japan.

Plants were grown in isolated blocks and rogued to best lines then to best plants within the best lines. Seed from these plants was saved O.P. As lines became true to type the blocks were made larger until enough seed was obtained to produce a block true to desired type. Most frequent variants were plants larger than desired and plants not as free flowering as desired. The original generations contained up to 50% non-dwarf plants, and up to 50% late or poor flowering. This number decreased as they became true breeding. Established as completely true breeding in 1969.

Came completely true in Burpee trials in Pennsylvania 1969 (not trialled 1970), 1971, 1972, 1973 and 1974. Also came completely true in Burpee trials in California in 1969, 1970, 1971, 1972, 1973 and 1974.

CALENDULA ORANGE GEM

13B. Exhibit B:

Annual. No special characteristics of seed, seedling or fruiting stage (that is, seed head), just typical of *Calendula officinalis*. Leaves mildly oblong obovate alternate single and more or less clasping, entire, thickish, rather hairy. Heads solitary on strong stalks, fully double with large flat spreading rays. Flowers 2-3/4 to 3 inches diameter, mid orange. Height 1 foot. Similar color but noticeably larger-flowered and more double than Muraji.
